PATENT  
09/845,464

In response to the Official Action mailed March 12, 2004, please amend the Application as follows:

Please amend the abstract to read:

Abstract

A system for directing users of varying and particularly limited reading skills through a reading of a received Web page which helps such users to ~~ignore Web page clutter and focus~~ on the page content direction. The Web page is transmitted in a plurality of selectable readable modes; at least one of which modes includes a movable indicator directing the user to read along the Web page in a predetermined orthogonal progressive pattern. The movable indicator is preferably an element highlighting a sequential block of data. ~~For example, the~~ The highlighted block of data may be brighter than the other data on the Web page or have a color different from the color of the other data on the Web page. The Web page is transmitted over the Web in a markup language comprising control tags enabling the Web page to be selectively read in ~~said~~ the moving indicator mode and there is a Web browser at ~~said~~ the receiving Web station for selectively reading ~~said~~ the received Web page in ~~said~~ the moving indicator mode.
